

DK600 SERIES

Drum Mic Sets

DK607

Samson's new DK600 Series Drum Mic Sets offer everything you need to achieve great sounding drums live or in the studio, no matter the size of your setup. The DK603, DK605 and DK607 include 3, 5 and 7 microphones respectively, all of which have been meticulously designed and tested to capture the natural tone of your kit.

All of the featured DK600 Series mics provide shock-mounted neodymium elements and precise capsule porting. The QK6 handles high SPLs and provides the optimal frequency response for properly capturing the full essence of your bass drum. The Q6I mics reproduce the attack and warmth of your snare drum and toms with a present, natural tone. Lastly, the C602 pencil condenser mics highlight the brilliance of your cymbals, as well as the full character of your drum performance when used as overheads.

In addition, every DK600 Series mic includes a durable, performance-tested mounting system for optimal placement. The Q6K and C602 mics feature swivel mounts that are compatible with all standard microphone stands, while the Q6I mics also include multi-position clips that securely attach to drum rims. Each kit's mics and mounting accessories pack up into a heavy-duty road case.
